## THE EVOLUTION IN PRO-HORMONAL SUPPLEMENTS

**TESTOCEM V8®** is the evolution in pro-hormonal supplements. After a long study and meticulous development work we already have the most complete formula for the support of endogenous testosterone levels with 100% Premium quality plant extracts. **TESTOCEM V8®** is intended for athletes who focus their training on increasing both the power and the development of muscle mass. Stress, poor nutrition and age directly influence the decrease in testosterone levels, which results in a greater loss of strength and vitality.

**TESTOCEM V8®** is composed of **10 ingredients** under the formula V8 = 7 herbal extracts + 1 Vitamin-mineral complex of Zinc + Mg + Vit.B6 hormonal support:

**TESTOFEN®:** [Fenugreek seed extract standardized for 50% Fenuside™ (Trigonella foenum-graecum L.)]

A double blind randomized study with respect to a placebo group assessed the efficacy of **Testofen®**. This study was carried out in Brisbane, Australia in 2014 and for this, 120 healthy men under andropause were used for 12 weeks with the daily supply of 600 mg / day of **Testofen®**. The data obtained at the end of the 12 weeks showed the following results:

- There were no changes in the levels of estrogen, prolactin, DHEA, androstenedione or progesterone in weeks 6 or 12.
- There was a significant increase in the active group compared to placebo, from the beginning until the end of treatment, for values of testosterone and free testosterone.
- An increase of 150% in the number of weekly erections.
- A 100% increase in the number of sexual intercourse each month.

## CONCLUSIONS

- Testofen® was effective in reducing the manifestations of andropause.
- Testofen® increased function, awakening and sexual desire.
- Testofen® increased the levels of testosterone and free testosterone.
- There were no notable side reactions, or changes in the safety blood markers.

THE EVOLUTION IN PRO-HORMONAL SUPPLEMENTS

## Saw Palmetto (*Serenoa repens*) and Stinging nettle (*Urtica dioica* L.):

In a published study it was determined that the consumption of saw palmetto and / or urtica dioica L. helped to inhibit 5 $\alpha$ -reductase in vivo which is the key in the transition from testosterone to dihydrotestosterone (DHT), being this responsible for the benign prostatic hyperplasia. This makes these herbal extracts an important support as an inhibitor in the production of DHT and for good prostate health.

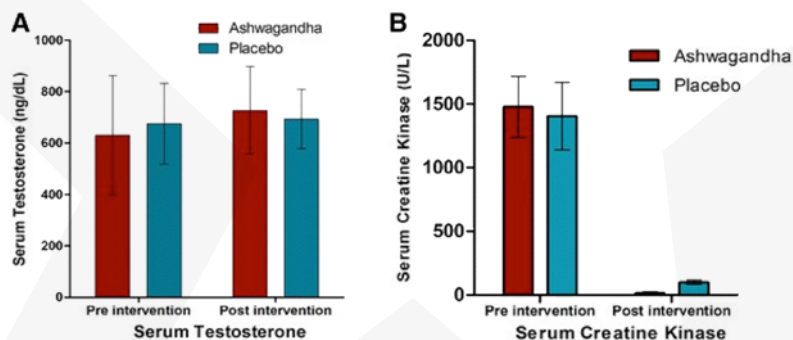

## Maca (*Lepidium meyenii*):

Maca is a plant that grows more than 4000 meters above sea level in the center of the Peruvian Andes. The hypocotyls of this plant are traditionally consumed for their properties on sexual desire, energy levels and antioxidant action.

## Ashwagandha (*Withania somnifera*):

Ashwagandha is a member of the family of herbs known as "adaptogens". The term "adaptogen" is applied to an herb with phytonutrients that regulate metabolism when a body is disturbed by physical or mental stress and helps the body adapt by normalizing system functions, developing resistance to stress in the future, and elevating the body functioning at a higher level of performance. There are studies that indicate:

- Increase in strength and vitality
- Increase in serum testosterone levels.
- Reduction of stress.

## Zinc - Magnesium - Vitamin B6:

Vitamin B6 helps regulate hormonal activity (C.E. approved) and supports the activity of zinc that contributes to the maintenance of normal levels of testosterone, fertility and reproduction. In addition magnesium helps to reduce fatigue and fatigue and contributes to protein synthesis.

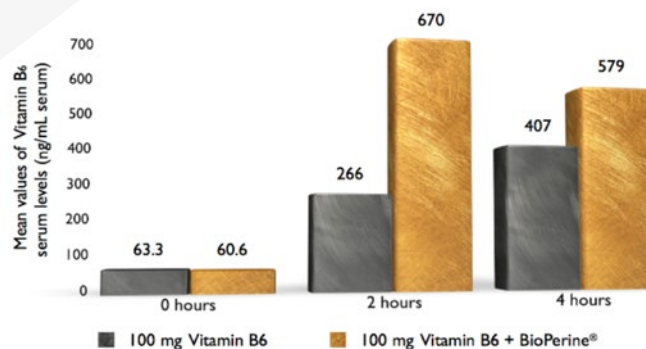

Therefore, these 3 ingredients act synergistically to support normal hormonal activity.

## Bioperine® (*Piper nigrum* L. Extract):

BioPerine® is a patented extract obtained from fruits of black pepper (*Piper nigrum*) standardized to 95% piperine.

BioPerine® can be co-administered with various nutrients to improve its bioavailability in humans and animals.

In general, BioPerine® improves the absorption of nutrients by at least 30%. According to the double-blind study conducted with BioPerine®, this increases the bioavailability of vitamin B6 up to 2.5 times more than the placebo group after 2 hours of administration and 1.4 times more after 4 hours of being administered compared to the group control.

THE EVOLUTION IN PRO-HORMONAL SUPPLEMENTS

## DIRECTIONS:

Take a daily dose (3 capsules) distributed between meals.  
With a 3-month cycle, the best results are achieved.

## PRESENTATION:

Box with 90 capsules vegetable.

## NUTRITIONAL INFORMATION:

### Amount per dose

	3 capsules	*%NRV
TESTOFEN® Extract of fenugreek standardized for 50% Fenuside™	600 mg	+
Maca extract	400 mg	+
Saw palmetto extract	300 mg	+
Ashwagandha extract	200 mg	+
Stinging nettle extract	200 mg	+
Avena sativa L. extract	100 mg	+
Bioperine® Piper nigrum L. extract	5 mg	+
Magnesium	250 mg	66.67%
Zinc	15 mg	150%
Vitamin B6	4.2 mg	300%

\*%NRV (Nutrient reference values)

+%NRV is not established

Recommended daily dose: 3 capsules . Dose per container: 30

## INGREDIENTS:

TESTOFEN® extract of fenugreek standardized for 50% Fenuside™, (Trigonella foenum-graecum L.) 33:1 (seed), magnesium oxide, maca extract (Lepidium meyenii Walp.) 0,01% macamides (root), glazing agent (E464), saw palmetto extract (Serenoa repens (W.Bartr.) Small) 30% lipid fatty acids (fruit), ashwagandha extract (Withania somnifera dun L.) 5:1 (root), stinging nettle extract (Urtica dioica L.) 10:1 (leaf), avena sativa L. extract (seed) 10:1, anti-caking agents (E 470b, E 551), zinc sulfate, pyridoxine hydrochloride (Vitamin B6), Bioperine® black pepper (Piper nigrum L.) 95% Piperine (fruit), colours (E171, E172). **WARNINGS:** Store in a cool, dry place. Heat and sunlight may damage the bottle. Keep out of the reach of children. Use this product in conjunction with food as part of a healthy, balanced diet, not as a substitute for such. Don't exceed the recommended daily dosage. Not recommended during pregnancy or breastfeeding. May contain **traces of gluten, milk, egg, soy, fish and crustaceans.**
